Hiring Manager
Zavvis

Dear Hiring Manager,

I am applying for the AI Engineer position at Zavvis. Your focus on production AI features, reliable conversational and agentic workflows, and close integration with backend systems matches my experience building LLM applications and the services around them.

My recent work has included retrieval-augmented generation, structured outputs, and inference services integrated with product and data platforms. I have used Python, OpenAI and Azure OpenAI, and built agentic workflows with LangGraph and tool/function calling. That experience is relevant to improving context handling and tool use at Zavvis, while systematic evaluation and debugging help make model behavior dependable in production.

I also bring backend engineering experience from healthcare-data and payment-system work, including APIs, data pipelines, automated testing, and reliability. This background would help me connect AI components to existing services, investigate edge cases across the stack, and consider data quality and operational constraints alongside model behavior.

I would welcome the opportunity to work closely with your founder and technical team, turning product requirements into tested AI capabilities and iterating on them quickly. Thank you for considering my application; I would be glad to discuss how my production AI and backend experience could contribute to Zavvis.

Sincerely,

123 123
